

## **IMMUNONANOPARTICLES**

### **ABSTRACT OF THE DISCLOSURE**

A functionalized composition for use in forming an immunonanoparticle. The functionalized composition includes a nanoparticle-forming polymer and a polymeric strand having a first end attached to the nanoparticle-forming polymer and a second end to which a conjugation agent is attached. The functionalized composition is combined with non-functionalized compositions to form nanoparticles compositions that can be used to provide targeted delivery of drugs and diagnostic agents.
